Mastery in Flexibility: Structured Cabling Systems

Structured Cabling Systems are at the base of modern information network. Designed to accommodate frequent moves, additions and changes quickly and cost effectively, a structured cabling system can alleviate workflow disruptions and network downtime associated with enterprise restructuring. Building an IT infrastructure that is "future ready" is more important than ever.

A structured cabling system provides a platform upon which an overall information system strategy is built. With a flexible cabling infrastructure, a structured cabling system can support multiple voice, data, video and multimedia systems, regardless of their manufacturer.

Relief For Any Company

Cat 5e, Cat 6 or Cat6a solutions are successfully deployed for our customers.

Fiber Optic Solutions: Conventional and blown fiber cabling solutions that compliment the deployment of optical solutions deeper into the network, and thus delivering a future-proof infrastructure.

Specialty Cabling Solutions: Copper and fiber solutions for diverse and environmentally demanding applications such as Mass Transit, Marine, Automotive and Aerospace that typically require adherence to strict performance criteria.

Low-Voltage Cabling: Solutions that include music and paging systems, CCTV.

Consistency: Same cables exist everywhere in the building.

Support Of Multi-Vendor Equipment: You can mix and match vendors.

Simplifies Moves, Additions And Changes:

As your company grows and/or moves to new locations with structured cabling, your network resources are always ready to go.

Simplifies Troubleshooting: With a wired structured system, problems are easier to isolate and fix.

Support For Future Applications: A Cat 5e or even Cat 6 compliant system will support future applications with little, if any, system upgrades.
