Unified Cloud Management

Mastery in Orchestration: Unified Cloud Management

The key for success in the Cloud market is management, just like in global IT. Vendor and infrastructure independent management unification gives ability to all layer management, provisioning and billing services. There are many specialized management solutions in the market which do cover some minor or major parts of the management, provisioning and billing solutions.

Probil provides integration and interoperability between each of this segments using a unified solution strategy and tailored implementations based on customer requirements.

Benefits Of Our Solution

First of all, there is no single Cloud. Every user, every company, every vendor has a different point of view and a different attitude towards The Cloud.

After hundreds of meetings with customers and presentations from vendors, we at Probil came to the conclusion that there is no right or wrong way to realize The Cloud. But we also saw a common point in every solution or demand: The need for an easy, reliable and centralized management, provisioning and billing system. And this is, together with end to end security solutions, the proposal of Probil.

The solution aims for an automatization of environments in all types of infrastructure. We develop a portal platform where the enduser can request his requirements by himself on a pay-as-use basis. The environment utilizes all needs on storage, processing power and application for any Small to Enterprise business... You can give tablets to everyone in a 30 person office and make them use the Virtual Desktop Infrastructure as a Service... Many different management tools are available, but our vision is to provide a unified, centralized platform to cover all management, provisioning and infrastructure billing needs... It covers every aspect from virtualized infrastructures to physical servers; from Storagespace to the Networking Infrastructure; from Desktop Management to Application provisioning... All including an end-to-end Security Concept and Solution

Our Contribution Value:

The provided Unified Management makes IT tasks easier and more reliable. So it makes your IT works more efficient.

We at Probil look on a unified management tool, giving us the power and ability to manage, provision and bill the used resources including Server (CPU, Ram), Network (Bandwidth, Latency) Storage (I/O, Disk usage), Software (Operating System, Applications)..

We do not want to reinvent the wheel. We take the most advanced 'to the point' management with billing and provisioning tools available and, integrate them into a unified portal giving a single interface to manage provision and bill their Cloud structure.
