Mastery in Connection: Wireless Broadband Solutions

Mobile users require the same accessibility, security, quality of service and high availability currently enjoyed by wired users.

Whether you are at work, home or on the road, be it local or international, there is a need to connect. Companies are deriving business value from mobile and wireless solutions.

What once was a vertical market technology is now mainstream, and is an essential tool in getting access to voice, real-time information, and critical applications such as e-mail and calendar, enterprise databases, supply chain management, sales force automation, and customer relationship management.

Probil offers end-to-end solutions for public and private Wi-Fi networks with seamless mobility and roaming features.

Probil Wi-Fi broadband solution includes designing, implementation and operation of:

- Wireless Hotspots / End Points and Access Networks
- Central Aggregation and Enforcement Nodes
- Policy Management and Dynamic Enforcement
- Subscriber and Product-Service Management
- User Authentication, Service Authorisation and Accounting
- Captive Portal and Content Management Systems
- Post-Paid and Pre-Paid Subscription
- Time & Volume Based Charging, Application Based Control
- Location, Time, Profile Based Service Delivery
- Dynamic Rating, Charging and Promotions
- Network, Service and SLA Management, Trouble Ticketing
- Dashboards and Reporting
- Payment-Billing Systems Integration
- North Bound Interfaces

Probil's Planning, Design, Implementation, Operating and Optimizing services enable operators to have an improved network performance, availability and security to maintain service assurance.
